(1) Boundaries at 1 January 2014.

(2) Three alternative projections have been produced using different combinations of fertility, mortality, and migration assumptions for each area.

(3) These projections have as a base the estimated resident population of each area at 30 June 2013.

(4) Calculated as a constant rate of population change over the period.

(5) The medium projection of the North Island is the sum of the medium projections of the North Island regions. The low and high projections of the North Island are derived independently of the regional projections.

(6) The medium projection of the South Island is the sum of the medium projections of the South Island regions. The low and high projections of the South Island are derived independently of the regional projections.

(7) New Zealand comprises the North Island and South Island regions plus areas not included in a region (eg Chatham Islands territory). The high, medium, and low projections are from the 95th percentile, 50th percentile (median), and 5th percentile, respectively, of the 2014-base national population projections (released November 2014).

Notes: All derived figures have been calculated using data of greater precision than published.

Owing to rounding, individual figures may not sum to stated totals.

(1) Boundaries at 1 January 2014.

(2) Estimates for 1996–2013 are the estimated resident population of each area. Projections for 2018–43 have as a base the estimated resident population of each area at 30 June 2013 and incorporate medium fertility, mortality, and migration assumptions for each area.

(3) Historical data refers to live births registered in New Zealand to mothers resident in each area.

(4) Historical data refers to deaths registered in New Zealand of people resident in each area.

(5) Births minus deaths. Negative values denote natural decrease.

(6) Net external migration plus net internal migration. Historical data is the difference between estimated population change and natural increase.

(7) Half the population is younger, and half older, than this age.

(8) The medium projection of the North Island is the sum of the medium projections of the North Island regions.

(9) The medium projection of the South Island is the sum of the medium projections of the South Island regions.

(10) New Zealand comprises the North Island and South Island plus areas not included in a region (eg Chatham Islands territory). The medium projection of New Zealand is from the 50th percentile (median) of the 2014-base national population projections (released November 2014).

Notes: All derived figures have been calculated using data of greater precision than published.

Owing to rounding, individual figures may not sum to stated totals.

(1) Boundaries at 1 January 2014.

(2) Estimates for 1996–2013 are the estimated resident population of each area. Projections for 2018–43 have as a base the estimated resident population of each area at 30 June 2013 and incorporate medium fertility, mortality, and migration assumptions for each area.

(3) Historical data refers to live births registered in New Zealand to mothers resident in each area.

(4) Historical data refers to deaths registered in New Zealand of people resident in each area.

Table 5

Projected population age structure and components of change**Territorial authority areas**

1996–2043 (2013-base), medium projection

Territorial authority area ⁽¹⁾	Year	Population ⁽²⁾ by age group (years), at 30 June					Components of population change, five years ended 30 June				Median age ⁽⁷⁾ (years) at 30 June
		0–14	15–39	40–64	65+	Total	Births ⁽³⁾	Deaths ⁽⁴⁾	Natural increase ⁽⁵⁾	Net migration ⁽⁶⁾	

(5) Births minus deaths. Negative values denote natural decrease.

(6) Net external migration plus net internal migration. Historical data is the difference between estimated population change and natural increase.

(7) Half the population is younger, and half older, than this age.

Notes: All derived figures have been calculated using data of greater precision than published.

Owing to rounding, individual figures may not sum to stated totals.

(1) Boundaries at 1 January 2014.

(2) Estimates for 1996–2013 are the estimated resident population of each area. Projections for 2018–43 have as a base the estimated resident population of each area at 30 June 2013 and incorporate medium fertility, mortality, and migration assumptions for each area.

(3) Historical data refers to live births registered in New Zealand to mothers resident in each area.

(4) Historical data refers to deaths registered in New Zealand of people resident in each area.

(5) Births minus deaths. Negative values denote natural decrease.

(6) Net external migration plus net internal migration. Historical data is the difference between estimated population change and natural increase.

(7) Half the population is younger, and half older, than this age.
